

The Liquid Life

Liquid water

flowing with life,

Seas and oceans

making the highlife.

Our planet is unique

with rivers and lakes,

Grows flora and fauna

to life it takes.

That's why we should conserve

so we all can be happy,

Help the planet to stay diverse

by not being scrappy.

If we continue our polluting habit

freshwater sources depart our planet,

If water is wasted without a thought

we will bear the brunt of drought,

So save our water, keep it holy,

it is liquid life, sip it slowly.
