

# WATER

Water and living beings  
Are always closely bound  
For every need of man  
Water is the solution found.

This is a single word  
But its forms are many  
Sometimes it is still, sometimes flowing  
Sometimes it pours, at times frozen uncanny

Sometimes it oozes through the ground  
Sometimes drizzles from the sky  
Though there are many sources  
Before using, we should be aware, 'why?'

Water is a must for raising crops  
In deserts it is a blessing  
Rain is very important in the water cycle  
We should surely focus on its storing.
